

SKIN TIGHTENING

WHAT IS A SKIN TIGHTENING TREATMENT?

Fat Cavitation as it is also known as, uses low frequency ultrasound directly to the targeted area of fat cells. The cells are subject to a strong wave of pressure, in which they cannot withstand, and in turn breaks down the cell membrane and disintegrates.

WHAT DOES CAVITATION DO TO THE SKIN?

Ultrasonic cavitation tones the body using radio frequencies and low-frequency ultrasonic waves. These waves form bubbles around fat deposits under the skin. The bubbles then burst, breaking the fat deposits into the interstitial and the lymphatic systems where they are drained.

HOW QUICKLY WILL I SEE RESULTS?

You should start to see the effects between six and 12 weeks after treatment, as the process takes time to work through your body. People often have several sessions over a few weeks and months.

CAN LOOSE SKIN BE TIGHTENED WITH LASER?

Bottom line: Laser resurfacing can tighten skin, usually better than any other skin-tightening procedure. It can also diminish fine lines, wrinkles, and dark spots on the skin, such as age spots. The tradeoff is that it requires downtime and has a greater risk of possible side effects, such as scarring.

DOES CAVITATION MACHINE TIGHTEN SKIN?

If you are looking for a non-invasive treatment to help contour your body, reduce the appearance of cellulite and tighten skin then RF skin tightening and fat cavitation may be the perfect treatment for you. With no down time needed after your treatment, it's easy to fit into your busy schedule.

SKIN TIGHTENING

HOW MANY TIMES CAN YOU GET CAVITATION TREATMENTS?

How many treatments can I have? We recommend you have a course of 6 and a maximum of 12 treatments before having a break of 4 weeks to allow your body to recover. You should allow 72 hours between treatments.

DOES FAT COME BACK AFTER CAVITATION?

Ultrasound fat cavitation empties out your fat cells, rather than destroying them like liposuction does. The fat will almost always come back, but with fat cavitation, at least it won't appear where you least expect it. To make your results last longer, you'll need a great diet and plenty of regular exercise.

HOW MUCH WATER SHOULD I DRINK AFTER CAVITATION?

To ensure that your body responds well to ultrasound fat cavitation, drink a minimum of 1.5 liters/ 6 cups of water before and following your treatment. Stagger 2 liters intake of water over 24 hours, for three days post-treatment.

CAN I DO CAVIATION AND FAT FREEZING SESSIONS?

Absolutely, best results can be achieved with a combination of Cryolipolysis and Cavitation treatments.
